Location: Álvaro Obregón, Mexico City | Time Zone: CST (GMT-6)

Availability: Open to remote, hybrid, or in-person opportunities.

Professional Summary

Software Engineer with a proven record of doubling team productivity by designing and implementing innovative, AI-driven development tools. My background in Industrial Robotics Engineering provides a strong foundation in systemic thinking, allowing me to build scalable solutions that optimize the entire workflow. I specialize in creating full-stack applications with React, Next.js, and Python to solve complex business challenges and accelerate growth.

Work Experience

Innovation Lead & Frontend Engineer | NativeBo

(Jan 2024 – Present)

- **Engineered an AI-powered landing page generator** using Next.js and the Google Gemini API. This internal tool automated 90% of the creation process—including design, copy, and coding—doubling the team's output from 80 to **160+ high-quality landings per month**.
- Reduced development time for new landing pages by **50%**, enabling each developer to produce 2 sites per day instead of 1, significantly increasing client capacity.
- Developed a complementary full-stack news management system (Next.js, Node.js, MongoDB) that automated article formatting and deployment, cutting content publishing time and effort by 45%.
- Created automated Node.js scripts to manage and update sitemaps for the news portal, ensuring optimal SEO performance and eliminating manual updates.

Frontend Web Developer | Loeram Software Solutions

(Apr 2023 – Jan 2024)

- Implemented a secure, server-side PDF compression system with FastAPI and Ghostscript that reduced file sizes by up to 65% while ensuring all data remained within a private network, eliminating reliance on third-party tools.

- Led the redesign of the main platform's UI, establishing a new design system and component architecture (buttons, tables, responsive layouts) that became the standard for all new feature development.

Junior Frontend Developer | iFectivo

(Mar – Oct 2022)

- Enhanced user experience in complex forms by conducting A/B tests and implementing UI improvements, such as multi-step processes and intelligent defaults, based on direct team feedback.
- Contributed to the development and maintenance of the main client management system, building key interfaces for debt collection agents.

Projects & Leadership

Vice President & Lead Developer | CREA Robotics Club

(2021 – Jan 2022)

- Designed, developed, and managed the club's official website and a full-stack tournament management system using SQL to handle registrations, scheduling, and classifications for multiple competitive events.
- Applied systemic thinking to create robust solutions for real-world logistical challenges, directly impacting hundreds of participants.

Technical Skills

- **Expert:** JavaScript (ES6+), TypeScript, React, Next.js, Node.js, Python, HTML5, CSS3, TailwindCSS.
- **Proficient:** SQL (MySQL, SQLite), MongoDB, FastAPI, Git, GitHub, Netlify.
- **Familiar:** Java, Spring Boot, Kotlin, C++, Cloudflare, AWS.
- **Marketing & SEO Context:** Google Ads, META Ads, SEO, Internationalization (i18n).

Languages

- Spanish (Native)
- English (Professional Working Proficiency)

Education

Instituto Politécnico Nacional

Bachelor's in Industrial Robotics Engineering.

Courses & Training

FreeCodeCamp, Platzi, Udemy and YouTube.
